Homework

due on Tuesday, September 4

Problem 1. For positive integers a, b define $[a, b] = ab/\operatorname{gcd}(a, b)$.

- a) Prove that $a / \gcd(a, b)$ and $b / \gcd(a, b)$ are relatively prime.
- b) Prove that if a|c and b|c then [a, b]|c.

c) Conlcude that [a, b] is the smallest positive integer divisible by both a and b (we call it the **least common multiple of** a **and** b).

Problem 2. Let $F_n = 2^{2^n} + 1$, for n = 0, 1, 2, ...

- a) Prove that $F_0 \cdot F_1 \cdot F_2 \cdot \ldots \cdot F_n = F_{n+1} 2$ for every n.
- b) Prove that $gcd(F_n, F_m) = 1$ for $n \neq m$.

Solve problem 16 (page 43) and read sections 1.5, 1.6 of Lauritzen's book.
