

Instructions for the midterm

Your problems will be given in one of the following formats:

- True/False questions
- Multiple choice
- Fill in the blanks (with a list of possible choices being given to you)
- Essay

Fill in the blanks:

If you are given a list to choose from the answer(s) for fill in the blanks questions then do not become creative and design your own answer format. The acceptable answer or answers all will be part of that list!

Essays:

For an essay you provide your answer free form: You will type it into a text box. You will not be asked to upload any files with handwritten, scanned, solutions. You will not have any problems with writing mathematical symbols if you follow these rules:

- Write fractions $\frac{a}{b}$ as a/b
- "Hatted" variables: If the response variable name is y then write the "predicted" variable \hat{y} of the regression line as either of y^\wedge or y -hat.
- The means of a list: If the variable name is y then write \bar{y} as either mean-of- y or $\text{mean}(y)$ or y -bar.
- You need not worry about \sum notation or even square roots.

- Save frequently by clicking the LIGHT GREEN "Save Answer" button
- DO NOT click the dark green "Save and Submit button". If you do then you will not be able to continue!

If you encounter an issue during the exam then email YOUR TA immediately and wait for them to get back to you.

Good luck! – MF –
