

## Math 330 Section 5 - Fall 2023 - Homework 15

Published: Saturday, November 25, 2023

Running total: 50 points

Last submission: Thursday evening, December 7, 2023

### Status - Reading Assignments:

Here is the status of the reading assignments you were asked to complete before the first one of this HW.

MF lecture notes:

ch.2.1 – 2.7, ch.3, skim ch.4 (optional), ch.5 - ch.12.5; skip ch.12.6 (optional)

B/G (Beck/Geoghegan) Textbook (optional, EXCEPT for ch.3 on logic):

ch.1 – 3, ch.5 – 12

B/K lecture notes:

ch.1.1 (Introduction to sets) (optional)

ch.1.2 (Introduction to Functions) but skip ch.1.2.4: Floor and Ceiling Functions (optional)

### New reading assignments:

#### Reading assignment 1 - due Monday, November 27:

- Carefully read MF ch.12.7 and 12.8. You might have problems with subspaces, since this is a very subtle concept!

#### Reading assignment 2 - due Wednesday, November 29:

- a. Carefully read MF ch.12.9 and 12.10 until Theorem 12.10.

#### Reading assignment 3 - due Friday, December 1:

- a. Carefully read the remainder of MF ch.12.10.
- b. Carefully read MF ch.13.1.1 until Example 13.1.

**Be sure to read pages 2 and 3!**

### Supplementary instructions for reading MF ch.12:

When you read or reread any topics in those chapters then the following is good advice:

- a. MF ch.12.1: Draw as many pictures as possible to get a feeling for the abstract concepts. Use the metric spaces  $(\mathbb{R}^2, d_{\|\cdot\|_2})$  and  $(\mathcal{B}(X, \mathbb{R}), d_{\|\cdot\|_\infty})$  for this. Do these drawings in particular for
  - open sets and neighborhoods (ch.12.1.3)
  - convergence, expressed with nhoods (the end of def.12.10 in ch.12.1.4)
  - metric and topological subspaces (ch.12.1.7): draw an irregular shaped subset  $A \subseteq \mathbb{R}^2$  in two pieces  $A = A_1 \uplus A_2$  which do not overlap. Draw some points  $x_j \in A$  with  $\varepsilon$ -nhoods (circles with radius  $\varepsilon$  about  $x_j$ ) so that some circles are entirely in  $A$ , one with  $x_j \in A_1$  which reaches into  $A^\circ$  but not into  $A_2$ , and one with  $x_j \in A_2$  which reaches both into  $A^\circ$  and  $A_1$ . What is  $N_\varepsilon^A(x_j)$ ?
  - Contact points, closed sets and closures (ch.12.1.8): Draw subsets  $B \subseteq \mathbb{R}^2$  with parts of their boundary (periphery) drawn solid to indicate that points there belong to  $B$  and other parts drawn dashed to indicate that those boundary points belong to the complement. What is  $\bar{B}$ ?  
 Draw points “completely inside”  $B$ , others “completely outside”  $B$ , and others on the solid and dashed parts of the boundary. Which ones can you approximate from within  $B$  by sequences? Which ones can you surround by circles that entirely stay within  $B$ , i.e., which ones are interior points of  $B$ ? Which ones can you surround by circles that entirely stay outside the closure of  $B$ , i.e., which ones are entirely within  $\bar{B}^\circ$ ? Use those pictures to visualize the definitions in this chapter and thm 12.6 and thm.12.7.
  - Now repeat that exercise with an additional set  $A$  which is meant to be a metric subspace of  $\mathbb{R}^2$ .
- b. MF ch.12.2 (Continuity): Draw as many pictures as possible to get a feeling for continuity, especially if you did not take multivariable calculus and are not used to dealing with continuous/differentiable functions of more than one variable. Here is a picture.

Figure 0.1:  $\varepsilon$ - $\delta$  continuity

Written assignments on pages 3 and 4

**Written assignment 1:** (3 points!) Prove MF prop.11.13 (Properties of the sup norm):  $h \mapsto \|h\|_\infty = \sup\{|h(x)| : x \in X\}$  defines a norm on  $\mathcal{B}(X, \mathbb{R})$

This assignment is worth three points: **One point each** for pos.definite, absolutely homogeneous, triangle inequality!

**Hint:** Go for a treasure hunt in ch.9.2 (Minima, Maxima, Infima and Suprema), and look at the properties of  $\sup(A)$  ( $A \subseteq \mathbb{R}$ ) to prove absolute homogeneity and the triangle inequality.

This assignment is worth three points, and you will have to earn them! The following exemplifies the level of detail I expect you to provide.

To prove that  $\|\cdot\|_\infty$  satisfies the triangle inequality (11.27c) of a norm you will have to write something along the following lines:

c. Triangle inequality.

NTS:  $\|f + g\|_\infty \leq \|f\|_\infty + \|g\|_\infty$  for all  $f, g \in \mathcal{B}(X, \mathbb{R})$ .

Proof:

$$\begin{aligned} \|f + g\|_\infty &= \sup\{|f(x)| + |g(x)| : x \in X\} \quad (\text{definition of } \|\cdot\|_\infty) \\ &= \dots \quad (\dots) \\ &\leq \dots \quad (\dots) \\ &= \|f\|_\infty + \|g\|_\infty \quad (\dots) \end{aligned}$$

(There may be fewer or more steps in your proof. The above only serves as an illustration!)

No need to justify properties of the absolute value  $|\alpha|$  of a real number  $\alpha$ , but you will need to justify why

$$\sup\{|\alpha f(x)| : x \in X\} = |\alpha| \sup\{|f(x)| : x \in X\},$$

and why

$$\sup\{|f(x) + g(x)| : x \in X\} \leq \sup\{|f(x)| : x \in X\} + \sup\{|g(x)| : x \in X\}.$$

An aside: <b>DO NOT</b> write $\ f(x)\ _\infty$ when you deal with the real number $f(x)$ (and <b>you probably mean</b> the absolute value $ f(x) $ ).
--

$\ \cdot\ _\infty$ is defined for functions $f$ , NOT for numbers $f(x)$ !
--

**Written assignment 2 (3 points):**

Prove MF thm.12.1 (Norms define metric spaces): Let  $(V, \|\cdot\|)$  be a normed vector space. Then the function

$$d_{\|\cdot\|}(\cdot, \cdot) : V \times V \rightarrow \mathbb{R}_{\geq 0}; \quad (x, y) \mapsto d_{\|\cdot\|}(x, y) := \|y - x\|$$

defines a metric space  $(V, d_{\|\cdot\|})$ .

This assignment is worth three points: **One point each** for pos.definite, symmetry, triangle inequality!

**Hint:** You will have to show for each one of (12.1a), (12.1b), (12.1c) how it follows from def. 11.15: Which one of (11.31a), (11.31b), (11.31c) do you use at which spot?

Careful with symmetry: What is the reason that  $\|a - b\| = \|b - a\|$ ?

This assignment is worth three points, and you will have to earn them! The following exemplifies the level of detail I expect you to provide.

To prove, e.g., that  $d_{\|\cdot\|}(\cdot, \cdot)$  satisfies the triangle inequality (12.1c) of a metric you will have to write something along the following lines:

**c.** Triangle inequality.

NTS:  $d_{\|\cdot\|}(x, z) \leq d_{\|\cdot\|}(x, y) + d_{\|\cdot\|}(y, z)$  for all  $x, y, z \in X$ .

Proof:

$$\begin{aligned} d_{\|\cdot\|}(x, z) &= \|z - x\| && \text{(definition of the metric } d_{\|\cdot\|}) \\ &= \dots && \text{(.....)} \\ &\leq \dots && \text{(.....)} \\ &= d_{\|\cdot\|}(x, y) + d_{\|\cdot\|}(y, z) && \text{(.....)} \end{aligned}$$

(There may be fewer or more steps in your proof. The above only serves as an illustration!)
