

Math 330 Section 6 - Spring 2024 - Homework 13

Published: Tuesday, April 2, 2024

Running total: 51 points

Last submission: Friday, April 19, 2024

Status - Reading Assignments:

The reading assignments you were asked to complete before the first one of this HW are:

MF lecture notes:

ch.2.1 – 2.7, ch.3, skim ch.4 (optional), ch.5 - 12.10, Theorem 12.10

B/G (Beck/Geoghegan) Textbook:

ch.2 - 12

B/K lecture notes:

ch.1.1 (Introduction to sets) (optional)

ch.1.2 (Introduction to Functions) but skip ch.1.2.4: Floor and Ceiling Functions (optional)

Other:

Stewart Calculus 7ed - ch.1.7: “The Precise Definition of a Limit”. If you have a newer or older edition then you may have to search through the table of contents and/or consult the index.

New reading assignments:

Reading assignment 1 - due Monday, April 8, 2024:

- a. Carefully read the remainder of MF ch.12.10.
- b. Extra carefully read MF ch.13.1.1.
- c. Carefully read MF ch.12.1.2. (Very brief.)
- d. The stronger students are encouraged to read MF ch.12.1.3.

Reading assignment 2 - due: Wednesday, April 10, 2024:

- Study for the midterm!

Reading assignment 3 - due Friday, April 12, 2024:

- a. Carefully read MF ch.13.2.1 and 13.2.2. Note that the very lengthy proof of Riemann’s rearrangement theorem has been marked optional.

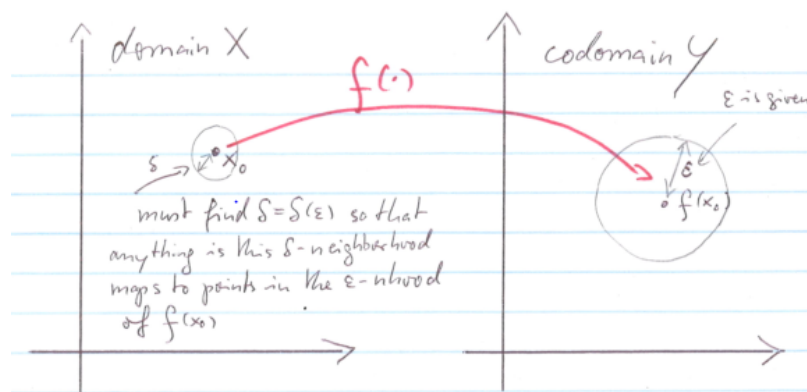

Be sure to read pages 2 and 3!

Supplementary instructions for reading MF ch.12:

When you read or reread any topics in those chapters then the following is good advice:

- a. MF ch.12.1: Draw as many pictures as possible to get a feeling for the abstract concepts. Use the metric spaces $(\mathbb{R}^2, d|_{\|\cdot\|_2})$ and $(\mathcal{B}(X, \mathbb{R}), d|_{\|\cdot\|_\infty})$ for this. Do these drawings in particular for
 - open sets and neighborhoods (ch.12.1.3)
 - convergence, expressed with neighborhoods (the end of def.12.10 in ch.12.1.4)
 - metric and topological subspaces (ch.12.1.7): draw an irregular shaped subset $A \subseteq \mathbb{R}^2$ in two pieces $A = A_1 \uplus A_2$ which do not overlap. Draw some points $x_j \in A$ with ε -nhoods (circles with radius ε about x_j) so that some circles are entirely in A , one with $x_j \in A_1$ which reaches into A° but not into A_2 , and one with $x_j \in A_2$ which reaches both into A° and A_1 . What is $N_\varepsilon^A(x_j)$?
 - Contact points, closed sets and closures (ch.12.1.8): Draw subsets $B \subseteq \mathbb{R}^2$ with parts of their boundary (periphery) drawn solid to indicate that points there belong to B and other parts drawn dashed to indicate that those boundary points belong to the complement. What is \bar{B} ?
 Draw points “completely inside” B , others “completely outside” B , and others on the solid and dashed parts of the boundary. Which ones can you approximate from within B by sequences? Which ones can you surround by circles that entirely stay within B , i.e., which ones are interior points of B ? Which ones can you surround by circles that entirely stay outside the closure of B , i.e., which ones are entirely within \bar{B}^c ? Use those pictures to visualize the definitions in this chapter and thm 12.6 and thm.12.7.
 - Now repeat that exercise with an additional set A which is meant to be a metric subspace of \mathbb{R}^2 .
- b. MF ch.12.2 (Continuity): Draw as many pictures as possible to get a feeling for continuity, especially if you did not take multivariable calculus and are not used to dealing with continuous/differentiable functions of more than one variable. Here is a picture.

Figure 0.1: ε - δ continuity

Written assignments on page 3

Written assignment 1: (3 points!) Prove MF prop.11.13 (Properties of the sup norm): $h \mapsto \|h\|_\infty = \sup\{|h(x)| : x \in X\}$ defines a norm on $\mathcal{B}(X, \mathbb{R})$

This assignment is worth three points: **One point each** for pos.definite, absolutely homogeneous, triangle inequality!

Hint: Go for a treasure hunt in ch.9.2 (Minima, Maxima, Infima and Suprema), and look at the properties of $\sup(A)$ ($A \subseteq \mathbb{R}$) to prove absolute homogeneity and the triangle inequality.

This assignment is worth three points, and you will have to earn them! The following exemplifies the level of detail I expect you to provide.

To prove that $\|\cdot\|_\infty$ satisfies the triangle inequality (11.27c) of a norm you will have to write something along the following lines:

c. Triangle inequality.

NTS: $\|f + g\|_\infty \leq \|f\|_\infty + \|g\|_\infty$ for all $f, g \in \mathcal{B}(X, \mathbb{R})$.

Proof:

$$\begin{aligned} \|f + g\|_\infty &= \sup\{|f(x)| + |g(x)| : x \in X\} \quad (\text{definition of } \|\cdot\|_\infty) \\ &= \dots \quad (\dots) \\ &\leq \dots \quad (\dots) \\ &= \|f\|_\infty + \|g\|_\infty \quad (\dots) \end{aligned}$$

(There may be fewer or more steps in your proof. The above only serves as an illustration!)

No need to justify properties of the absolute value $|\alpha|$ of a real number α , but you will need to justify why

$$\sup\{|\alpha f(x)| : x \in X\} = |\alpha| \sup\{|f(x)| : x \in X\},$$

and why

$$\sup\{|f(x) + g(x)| : x \in X\} \leq \sup\{|f(x)| : x \in X\} + \sup\{|g(x)| : x \in X\}.$$

An aside: **DO NOT** write $\|f(x)\|_\infty$ when you deal with the real number $f(x)$ (and **you probably mean** the absolute value $|f(x)|$).

$\|\cdot\|_\infty$ is defined for functions f , NOT for numbers $f(x)$!

Written assignment 2 (3 points):

Prove MF thm.12.1 (Norms define metric spaces): Let $(V, \|\cdot\|)$ be a normed vector space. Then the function

$$d_{\|\cdot\|}(\cdot, \cdot) : V \times V \rightarrow \mathbb{R}_{\geq 0}; \quad (x, y) \mapsto d_{\|\cdot\|}(x, y) := \|y - x\|$$

defines a metric space $(V, d_{\|\cdot\|})$.

This assignment is worth three points: **One point each** for pos.definite, symmetry, triangle inequality!

Hint: You will have to show for each one of (12.1a), (12.1b), (12.1c) how it follows from def. 11.15: Which one of (11.31a), (11.31b), (11.31c) do you use at which spot?

Careful with symmetry: What is the reason that $\|a - b\| = \|b - a\|$?

This assignment is worth three points, and you will have to earn them! The following exemplifies the level of detail I expect you to provide.

To prove, e.g., that $d_{\|\cdot\|}(\cdot, \cdot)$ satisfies the triangle inequality (12.1c) of a metric you will have to write something along the following lines:

c. Triangle inequality.

NTS: $d_{\|\cdot\|}(x, z) \leq d_{\|\cdot\|}(x, y) + d_{\|\cdot\|}(y, z)$ for all $x, y, z \in X$.

Proof:

$$\begin{aligned} d_{\|\cdot\|}(x, z) &= \|z - x\| && \text{(definition of the metric } d_{\|\cdot\|}) \\ &= \dots && \text{(.....)} \\ &\leq \dots && \text{(.....)} \\ &= d_{\|\cdot\|}(x, y) + d_{\|\cdot\|}(y, z) && \text{(.....)} \end{aligned}$$

(There may be fewer or more steps in your proof. The above only serves as an illustration!)
